

Hydro Screens

Easy, Efficient Dewatering Fitted to Your Application

Garrouette's Hydro Screen provides ease and efficiency in dewatering a variety of products through continuous screening of food particles. In addition, the Hydro Screen provides coarse screening of waste water including chemical, industrial and municipal wastes.

Garrouette's Hydro Screens are available in a wide range of sizes to meet each customer's specific requirements. The Garrouette Hydro Screen can be designed for your application to satisfy your processing requirements.

• High Quality Construction

Manufactured for USDA approval, if required. The Hydro Screen is constructed of 14 gauge T-304 stainless steel. It has a hinged cover at the top and a flanged inlet connection with flow spreader. The flanged discharge connection can be fitted with an optional recirculation pump. The Hydro Screens are available in high and low capacity and are designed to each customer's specifications. Call Garrouette to discuss your specific requirements.

• Ease of Sanitation

The Hydro Screen is designed with a pivoting screen, providing easy access for sanitation personnel.

• Simple Installation

The Hydro Screen requires minimal installation space and structural support. Motors are not required.

• Simple to Use

Simple in design, the Hydro Screen is a quiet, vibration free unit with no moving parts.

• The Potential

Garrouette's Hydro Screen has performed successfully in many different applications with a broad range of materials.
